

**APPLICABLE to 2023 UG Batch onwards**  
**Chemical Engineering Course Curriculum**  
**(updated 20 March, 2024)**

| <b>Semester 1</b>  | <b>B.Tech. Credits = 33</b> | <b>Dual Degree Credits = 0</b>    | <b>Total Credits = 33</b> |
|--------------------|-----------------------------|-----------------------------------|---------------------------|
| <b>Course Code</b> | <b>Course Name</b>          | <b>Category</b>                   | <b>Credits</b>            |
| CH 111             | Chemistry                   | Basic Sciences and Mathematics    | 8                         |
| CS 101             | Computer programming        | Engineering Sciences and skills   | 6                         |
| GC 101             | Gender sensitization course | Non - Credited compulsory Courses | 0                         |
| HSS/IDC/ENT        | Introduction to HASMED      | HASMED Core                       | 8                         |
| MA 105             | Calculus                    | Basic Sciences and Mathematics    | 8                         |
| NOCS 01            | NCC/NSS/NSO                 | Non - Credited compulsory Courses | 0                         |
| PH 117             | Physics lab                 | Basic Sciences and Mathematics    | 3                         |

| <b>Semester 2</b>  | <b>B.Tech. Credits = 33</b>                   | <b>Dual Degree Credits = 0</b>    | <b>Total Credits = 33</b> |
|--------------------|-----------------------------------------------|-----------------------------------|---------------------------|
| <b>Course Code</b> | <b>Course Name</b>                            | <b>Category</b>                   | <b>Credits</b>            |
| CH 117             | Chemistry lab                                 | Basic Sciences and Mathematics    | 3                         |
| CL 102             | Material and Energy Balances                  | Department Core                   | 6                         |
| MA 110             | Linear Algebra and Differential Equations     | Basic Sciences and Mathematics    | 8                         |
| MS 101             | Makerspace                                    | Engineering Sciences and skills   | 8                         |
| NOCS 02            | NCC/NSS/NSO                                   | Non - Credited compulsory Courses | 0                         |
| PH 110             | Introduction to Classical and Quantum Physics | Basic Sciences and Mathematics    | 8                         |

| <b>Semester 3</b>  | <b>B.Tech. Credits = 36</b>                    | <b>Dual Degree Credits = 0</b>  | <b>Total Credits = 36</b> |
|--------------------|------------------------------------------------|---------------------------------|---------------------------|
| <b>Course Code</b> | <b>Course Name</b>                             | <b>Category</b>                 | <b>Credits</b>            |
| CL 205             | AI and Data Science                            | Engineering Sciences and skills | 6                         |
| CL 207             | Chemical Engineering Thermodynamics            | Department Core                 | 6                         |
| CL 254             | Process Fluid Mechanics                        | Department Core                 | 6                         |

**Prescribed Range of Credits for a UG programme is 252 to 276**

**Overall credits are in the prescribed range**

### Additional Credits for Dual Degree Requirement

| <i>Category of Courses</i> | <b>SUM of Credits</b> |
|----------------------------|-----------------------|
| Dual Degree Project        | 72                    |
| Honors                     | 24                    |
| PG Electives               | 24                    |
| <b>Grand Total</b>         | <b>120</b>            |

**Prescribed Range of Additional Credits  
for Dual Degree Requirement is 120 to  
124**

**Overall credits are in  
the prescribed range**

**Total Dual Degree Credits**

**387**

### Semester Wise Credit Summary

| Semester    | B.Tech. Credits | Dual Degree Credits | Total Credits |
|-------------|-----------------|---------------------|---------------|
| Semester 1  | 33              | 0                   | 33            |
| Semester 2  | 33              | 0                   | 33            |
| Semester 3  | 36              | 0                   | 36            |
| Semester 4  | 36              | 0                   | 36            |
| Semester 5  | 33              | 6                   | 39            |
| Semester 6  | 36              | 6                   | 42            |
| Semester 7  | 30              | 6                   | 36            |
| Semester 8  | 30              | 6                   | 36            |
| Semester 9  | 0               | 48                  | 48            |
| Semester 10 | 0               | 48                  | 48            |
|             | <b>267</b>      | <b>120</b>          | <b>387</b>    |

### Credit Range

| Category                              | Credits<br>(Min) | Credits<br>(Max) |
|---------------------------------------|------------------|------------------|
| Basic Sciences and Mathematics        | 32               | 44               |
| BTP/Equivalent Elective courses       | 18               | 18               |
| Department Core                       | 60               | 72               |
| Department Electives                  | 18               | 18               |
| Department Lab and SLP/PT/Works Visit | 18               | 24               |
| Engineering Sciences and skills       | 20               | 20               |
| Flexible Elective                     | 30               | 36               |
| HASMED Core                           | 20               | 20               |

# INDIAN INSTITUTE OF TECHNOLOGY BOMBAY

## Proposal for Introduction of a New Academic Course / Revision of Existing Academic Course

(Revised format for use from April, 2018)

Name of Academic Unit: Department of Chemical Engineering

(A) For Introduction of a new academic course titled “Separation Processes”

(Use the attached form for details of Introduction of new course)

### Introduction of New Academic Course

Autumn (proposal submission by March) / Spring Semester (proposal submission by October)\*

The proposal should be submitted **both in hard copy and electronic form (doc and pdf file)** using the format as given below. The hard copy is to be sent to the Academic Office and the soft copy be emailed to Jt. Registrar(Academic) <dracad@iitb.ac.in>

Name of the Academic Unit: **Department of Chemical Engineering**

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 6. | <b>Justification / Need for introduction:</b><br><br>Separation processes are ubiquitous in chemical industry. They account for a large fraction of the capital and operating costs of a chemical industry. Chemical engineers must be trained in the working principles of these operations, design and performance analysis of the equipment used to carry out these operations. The course provides fundamental concepts of various mass transfer operations and the common themes of the operations.<br><br><b>Learning outcomes:</b> At the end of the course, the students should be able to: <ul style="list-style-type: none"><li>● Apply the working principles of the mass transfer operations to solve problems</li><li>● Analyze the effects of various parameters on the performance of the operations</li><li>● Design the mass transfer equipment to achieve the desired separations</li></ul> |
| 7. | <b>Name(s) of other Academic units to whom the course may be relevant:</b> None                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

The soft copy (doc & pdf file) of the above course proposal is sent to academic office

Date: 20-Dec-2022

Signature of the Head of the Academic Unit

**INDIAN INSTITUTE OF TECHNOLOGY BOMBAY**

**Proposal for Introduction of a New Academic Course / Revision of Existing Academic Course**

(Revised format for use from April, 2018)

**Name of Academic Unit: Department of Chemical Engineering**

**(A) For Introduction of a new academic course titled** Not applicable  
(Use the attached form for details of Introduction of new course)

**(B) For Revision of the existing course (Course no. and its title) : CL 254: Process Fluid Mechanics**

(The course no. will remain same, for (B))

\* - tick (✓) in relevant box where change is proposed.

The above proposal is found to be acceptable by the academic body (DUGC) in its meeting held on 20-Dec-2022. The committee recommended the introduction of the new course for consideration of UGPC.

**Date: 20-Dec-2022**

To : The Convener, PGPC/UGPC

**Signature of Convener of DUGC/DPGC/PGC**

## Introduction of New Academic Course

### Autumn (proposal submission by March) / Spring Semester (proposal submission by October)\*

The proposal should be submitted **both in hard copy and electronic form (doc and pdf file)** using the format as given below. The hard copy is to be sent to the Academic Office and the soft copy be emailed to Jt. Registrar(Academic) <dracad@iitb.ac.in>

**Name of the Academic Unit: Department of Chemical Engineering**

| 6. | <b>Justification / Need for introduction:</b><br><br>A few changes have been made to the existing course contents.<br><br>Fluids are transported in process industry for various purposes. The knowledge of basic concepts of fluid flow, flow through pipes, and the flow past solids is thus essential for chemical engineers. The course intends to provide the knowledge of fluid flow and the equipment used for transportation of fluids.<br><br><b>Learning outcomes:</b> At the end of the course, the students should be able to:<br><ul style="list-style-type: none"> <li>● Analyze pipe flow under laminar and turbulent conditions and flow meters</li> <li>● Solve flow problems related to pumps and equipment used for agitation and mixing</li> <li>● Characterize flows past solids including packed beds, fluidization, sedimentation and filtration</li> </ul> |
| 7. | <b>Name(s) of other Academic units to whom the course may be relevant:</b> None                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

**The soft copy (doc & pdf file) of the above course proposal is to be sent to academic office**

**Date: 20-Dec-2022**

**Signature of the Head of the Academic Unit**

**INDIAN INSTITUTE OF TECHNOLOGY BOMBAY**

**Proposal for Introduction of a New Academic Course / Revision of Existing Academic Course**

(Revised format for use from April, 2018)

**Name of Academic Unit: Department of Chemical Engineering**

**(A) For Introduction of a new academic course titled** Not applicable

**(Use the attached form for details of Introduction of new course)**

**(B) For Revision of the existing course (Course no. and its title): CL 302: Process Control**

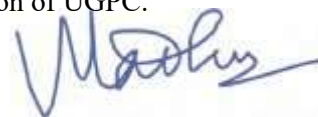

”

**(The course no. will remain same, for (B))**

## Introduction of New Academic Course

### Autumn (proposal submission by March) / Spring Semester (proposal submission by October)\*

The proposal should be submitted **both** in **hard copy** and **electronic form (doc and pdf file)** using the format as given below. The hard copy is to be sent to the Academic Office and the soft copy be emailed to Jt. Registrar(Academic) <dracad@iitb.ac.in>

**Name of the Academic Unit: Department of Chemical Engineering**

**The soft copy (doc & pdf file) of the above course proposal is sent to academic office on**

**Date: 20-Dec-2022**

**Signature of the Head of the Academic Unit**

**INDIAN INSTITUTE OF TECHNOLOGY BOMBAY**

**Proposal for Introduction of a New Academic Course / Revision of Existing Academic Course**

(Revised format for use from April, 2018)

**Name of Academic Unit: Department of Chemical Engineering**

**(A) For Introduction of a new academic course: Not applicable**

(Use the attached form for details of Introduction of new course)

**(B) For Revision of the existing course (Course no. and its title):**CL 152: Introduction to Chemical Engineering

”

(The course no. will remain same, for (B))

\* - tick (√) in relevant box where change is proposed.

The above proposal is found to be acceptable by the academic body (DUGC) in its meeting held on 20-Dec-2022. The committee recommended the introduction of the new course for consideration of UGPC.

**Signature of Convener of DUGC/DPGC/PGC**

**Date: 20-Dec-2022**

## Introduction of New Academic Course

**Autumn (proposal submission by March) / Spring Semester (proposal submission by October)\***

The proposal should be submitted **both** in **hard copy** and **electronic form (doc and pdf file)** using the format as given below. The hard copy is to be sent to the Academic Office and the soft copy be emailed to Jt. Registrar(Academic) <dracad@iitb.ac.in>

**Name of the Academic Unit: Department of Chemical Engineering**

Date: 20-Dec-2022

Signature of the Head of the Academic Unit

**INDIAN INSTITUTE OF TECHNOLOGY BOMBAY**

**Proposal for Revision of Existing Academic Course**

(Revised format for use from April, 2018)

**Name of Academic Unit: Department of Chemical Engineering**

**(A) For Introduction of a new academic course : N.A.**

**(B) For Revision of the existing course (Course no. and its title) : CL203: Introduction to Transport Phenomena**

**(The course no. will remain same, for (B))**

## Introduction of New Academic Course

### Autumn (proposal submission by March) / Spring Semester (proposal submission by October)\*

The proposal should be submitted **both in hard copy and electronic form (doc and pdf file)** using the format as given below. The hard copy is to be sent to the Academic Office and the soft copy be emailed to Jt. Registrar(Academic) <dracad@iitb.ac.in>

**Name of the Academic Unit: Department of Chemical Engineering**

| 6. | <b>Justification / Need for introduction:</b><br><br>A few minor changes have been made to the existing course contents<br><br>Transport phenomena is a core chemical engineering course that introduces students to concepts of momentum, energy and mass transfer. This course forms an important pre-requisite to detailed courses on each of these topics later in the UG curriculum.<br><br><b>Learning outcomes:</b> At the end of the course, the students should be able to:<br><br><ul style="list-style-type: none"> <li>● Write the differential equations to model transport of mass, momentum and energy for a given process</li> <li>● Identify the dominant mechanisms that govern transport of mass, momentum and energy, to simplify the differential equations</li> <li>● Write down the appropriate boundary conditions for the differential equations and solve them</li> <li>● Identify and apply the non-dimensional numbers such as Reynolds, Nusselt, Prandtl, Schmidt numbers to solve transport problems</li> <li>● Perform macroscopic balances, with the appropriate simplifications, for mass, momentum and energy transport</li> </ul> |
| 7. | <b>Name(s) of other Academic units to whom the course may be relevant:</b> None                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

**The soft copy (doc & pdf file) of the above course proposal is sent to academic office on**

**Date: 20-Dec-2022**

**Signature of the Head of the Academic Unit**

**INDIAN INSTITUTE OF TECHNOLOGY BOMBAY**

**Proposal for Introduction of a New Academic Course / Revision of Existing Academic Course**

(Revised format for use from April, 2018)

**Name of Academic Unit: Department of Chemical Engineering**

**(A) For Introduction of a new academic course titled Not applicable**

(Use the attached form for details of Introduction of new course)

**(B) For Revision of the existing course (Course no. and its title) : CL 244: Introduction to Numerical Analysis**

”

(The course no. will remain same, for (B))

Date: 20-Dec-2022

Signature of the Head of the Academic Unit

**INDIAN INSTITUTE OF TECHNOLOGY BOMBAY**

**Proposal for Introduction of a New Academic Course / Revision of Existing Academic Course**

(Revised format for use from April, 2018)

**Name of Academic Unit: Department of Chemical Engineering**

**(A) For Introduction of a new academic course titled “Introduction to Chemical Engineering”**

(Use the attached form for details of Introduction of new course)

**(B) For Revision of the existing course (Course no. and its title) : Not applicable**

”

(The course no. will remain same, for (B))

\* - tick (✓) in relevant box where change is proposed.

The above proposal is found to be acceptable by the academic body (DUGC) in its meeting held on 20-Dec-2022.

The committee recommended the introduction of the new course for consideration of UGPC.

## Introduction of New Academic Course

### Autumn (proposal submission by March) / Spring Semester (proposal submission by October)\*

The proposal should be submitted **both** in **hard copy** and **electronic form (doc and pdf file)** using the format as given below. The hard copy is to be sent to the Academic Office and the soft copy be emailed to Jt. Registrar(Academic) <dracad@iitb.ac.in>

**Name of the Academic Unit: Department of Chemical Engineering**

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| 6. | <b>Justification / Need for introduction:</b><br><br>The primary motivation of the course is to generate excitement among the first year undergraduate students for the discipline of chemical engineering. The course is intended to provide a historical perspective on the discipline of chemical engineering, understand its evolution, and highlight the emerging trends. The course will also emphasize the role of various core courses that students will take in the rest of the curriculum.<br><br><b>Learning outcomes:</b> At the end of the course, the students should be able to: <ul style="list-style-type: none"> <li>• Summarize the evolution of discipline of chemical engineering</li> <li>• Review important developments and innovations in the discipline</li> <li>• Explain the role of chemical engineering in societal and environmental context</li> <li>• Recognize emerging trends in the discipline</li> </ul> |
| 7. | <b>Name(s) of other Academic units to whom the course may be relevant:</b> None                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

Signature of the Head of the Academic Unit

**INDIAN INSTITUTE OF TECHNOLOGY BOMBAY**

**Proposal for Introduction of a New Academic Course / Revision of Existing Academic Course**

(Revised format for use from April, 2018)

**Name of Academic Unit: Department of Chemical Engineering**

**(A) For Introduction of a new academic course titled “Heat and Mass Transfer”**  
(Use the attached form for details of Introduction of new course)

**(B) For Revision of the existing course (Course no. and its title) : Not applicable**

”

(The course no. will remain same, for (B))

| 6. | <b>Justification / Need for introduction:</b><br><br>Heat transfer and Mass transfer are core subjects of chemical engineering discipline with several aspects having common origins. The course will cover in detail various topics of the heat and mass transfer with an emphasis on their industrial applications. The course will also emphasize the connection with other core courses.<br><br><b>Learning outcomes:</b> At the end of the course, the students should be able to: <ul style="list-style-type: none"> <li>• Analyze and solve problems related to: convective heat transfer, radiation, and interfacial mass transfer with and without chemical reactions</li> <li>• Explain the basic forms of the theories of interfacial mass transfer</li> <li>• Design different types of heat exchangers</li> </ul> |
| 7. | <b>Name(s) of other Academic units to whom the course may be relevant:</b> None                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

Date: 20-Dec-2022

Signature of the Head of the Academic Unit

**INDIAN INSTITUTE OF TECHNOLOGY BOMBAY**

**Proposal for Revision of Existing Academic Course**

(Revised format for use from April, 2018)

**Name of Academic Unit: Department of Chemical Engineering**

**(A) For Introduction of a new academic course**

**(B) For Revision of the existing course (Course no. and its title) : CL 324: Chemical Reaction Engineering**

**(The course no. will remain same, for (B))**

| 6. | <b>Justification / Need for introduction:</b><br><br>A few changes have been made to the existing course contents<br><br>Chemical Reaction Engineering (CRE) is a core chemical engineering course that introduces students to concepts of chemical kinetics and reactors. CRE plays a vital role in the design of chemical reactors, which are central to the chemical and petrochemical industries.<br><br>At the end of the course, students should be able to: <ul style="list-style-type: none"> <li>Analyze kinetics of chemical reactions</li> <li>Design chemical reactors with and without a catalyst</li> <li>Diagnose reactor malfunctioning using residence time distribution</li> </ul> |
| 7. | <b>Name(s) of other Academic units to whom the course may be relevant:</b> None                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

## Proposal for Introduction of a New Academic Course / Revision of Existing Academic Course

(Revised format for use from April, 2018)

Name of Academic Unit: Department of Chemical Engineering

(A) For **Introduction of a new academic course** titled

(Use the attached form for details of Introduction of new course)

(B) For **Revision of the existing course (Course no. and its title)** : CL 306: Chemical Processes

”

(The course no. will remain same, for (B))

| 6.                                                                                                                                                                                                                                                                                     | <b>Justification / Need for introduction:</b><br><br>A few changes have been made to the existing course contents<br><br>The primary motivation of the course is to familiarize students with various production processes that form the core of the chemical process industries. The processes are drawn from various sub-sectors such as Petroleum Refining, Petrochemicals, Specialty Chemicals, Pharmaceuticals, Inorganic Chemicals among others. Processes are analyzed to highlight their unique features and connect them to the concepts studied in other core courses such as Thermodynamics, Reaction Engineering. The course enables students to compare processes in various sectors to identify similarities and differences such as batch vs continuous processing, nature of downstream separation processes. This course serves as a useful survey of various typical process flow sheeting building blocks and motifs which the students can utilize when synthesizing a flowsheet for their design project.<br><br><b>Learning outcomes:</b> At the end of the course, the students should be able to: <ul style="list-style-type: none"><li>● Draw and describe the production routes for common industrial chemicals</li><li>● Critically analyze the need and function of various blocks in a chemical process flowsheet</li><li>● Connect process flowsheet features with concepts from thermodynamics, kinetics and other core subjects</li><li>● Identify similarities and differences for processes from various sub-sectors of the chemical industry</li></ul> |

The soft copy (doc & pdf file) of the above course proposal is sent to academic office on

Date: 20-Dec-2022

Signature of the Head of the Academic Unit

# INDIAN INSTITUTE OF TECHNOLOGY BOMBAY

## Proposal for Introduction of a New Academic Course / Revision of Existing Academic Course

(Revised format for use from April, 2018)

Name of Academic Unit: Department of Chemical Engineering

(A) For Introduction of a new academic course titled “Chemical Process Design II”  
(Use the attached form for details of Introduction of new course)

### Introduction of New Academic Course

Autumn (proposal submission by March) / Spring Semester (proposal submission by October)\*

The proposal should be submitted **both in hard copy and electronic form (doc and pdf file)** using the format as given below. The hard copy is to be sent to the Academic Office and the soft copy be emailed to Jt. Registrar(Academic) <dracad@iitb.ac.in>

Name of the Academic Unit: **Department of Chemical Engineering**

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 6. | <b>Justification / Need for introduction:</b><br><p>This course follows the earlier course, Chemical Process Design I. Process and mechanical design of the equipment, and economic analysis of chemical process are carried out in this course.</p> <b>Learning outcomes:</b> At the end of the course, the students should be able to: <ul style="list-style-type: none"> <li>● Select and design process equipment based on the process requirement</li> <li>● Design mechanical aspects of the basic process equipment</li> <li>● Analyze economics of the chemical process plant</li> <li>● Relate to the new trends in chemical process design</li> </ul> |
| 7. | <b>Name(s) of other Academic units to whom the course may be relevant:</b> None                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

Date: 14-Apr-2023

Signature of the Head of the Academic Unit

The proposal submitted for this course on 20-Dec-2022 had the following distribution for the lectures (L), tutorials (T) and practicals (P) every week for the six credits: L: 1, T: 0, and P: 4. Based on the UGPC suggestions, the distribution was discussed in DFM held on 12 April 2023 and it has been modified to L: 1, T: 2, and P: 0

# INDIAN INSTITUTE OF TECHNOLOGY BOMBAY

## Proposal for Introduction of a New Academic Course / Revision of Existing Academic Course

(Revised format for use from April, 2018)

Name of Academic Unit: Department of Chemical Engineering

(A) For Introduction of a new academic course titled “Chemical Process Design I”  
(Use the attached form for details of Introduction of new course)

### Introduction of New Academic Course

Autumn (proposal submission by March) / Spring Semester (proposal submission by October)\*

The proposal should be submitted **both in hard copy and electronic form (doc and pdf file)** using the format as given below. The hard copy is to be sent to the Academic Office and the soft copy be emailed to Jt. Registrar(Academic) <dracad@iitb.ac.in>

Name of the Academic Unit: Department of Chemical Engineering

|                                                                                                                                                                                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

Date: 14-Apr-2023

Signature of the Head of the Academic Unit

The proposal submitted for this course on 20-Dec-2022 had the following distribution for the lectures (L), tutorials (T) and practicals (P) every week for the six credits: L: 2, T: 0, and P: 2. Based on the UGPC suggestions, the distribution was discussed in DFM held on 12 April 2023 and it has been modified to L: 2, T: 1, and P: 0

# INDIAN INSTITUTE OF TECHNOLOGY BOMBAY

## Proposal for Introduction of a New Academic Course / Revision of Existing Academic Course

(Revised format for use from April, 2018)

Name of Academic Unit: Department of Chemical Engineering

(A) For Introduction of a new academic course “**Chemical Engineering Thermodynamics**”

(Use the attached form for details of Introduction of new course)

### Introduction of New Academic Course

Autumn (proposal submission by March) / Spring Semester (proposal submission by October)\*

The proposal should be submitted **both** in **hard copy** and **electronic form (doc and pdf file)** using the format as given below. The hard copy is to be sent to the Academic Office and the soft copy be emailed to Jt. Registrar(Academic) <dracad@iitb.ac.in>

Name of the Academic Unit: **Department of Chemical Engineering**

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| 6. | <b>Justification / Need for introduction:</b><br><br>The primary purpose of the course is to introduce and use the principles of thermodynamics. The course is intended to provide both classical heat, work calculations in a mechanical system, as also free energy and equilibrium calculations in a multicomponent, multiphase system, of special relevance to any separation process and various unit operations.<br><br><b>Learning outcomes:</b> At the end of the course, the students should be able to: <ul style="list-style-type: none"> <li>• Make mass, energy and entropy balance for any physical and chemical transformation in a batch or a continuous system for deriving heat and work requirements.</li> <li>• Calculate the various thermodynamic properties for both ideal and real systems and mixtures</li> <li>• Analyze and calculate phase and reaction equilibrium in multicomponent systems</li> <li>• Apply the equilibrium calculations to unit operations such as distillation, leaching, extraction</li> </ul> |
| 7. | <b>Name(s) of other Academic units to whom the course may be relevant:</b> None                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| 12. | <p><b>Existing course(s), (offered by the same or other academic units) which have significant overlap with the proposed course:</b> The topics of the two thermodynamics courses, CL 250 and CL 255, have been combined in the proposed course.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

**The soft copy (doc & pdf file) of the above course proposal is to be sent to academic office**

**Date: 20-Dec-2022**

**Signature of the Head of the Academic Unit**

# INDIAN INSTITUTE OF TECHNOLOGY BOMBAY

## Proposal for Introduction of a New Academic Course

(Revised format for use from April, 2018)

Name of Academic Unit: Department of Chemical Engineering

(A) For Introduction of a new academic course titled “AI and Data Science”

(Use the attached form for details of Introduction of new course)

### Introduction of New Academic Course

**Autumn (proposal submission by March) / Spring Semester (proposal submission by October)\***

*The proposal should be submitted both in hard copy and electronic form (doc and pdf file) using the format as given below. The hard copy is to be sent to the Academic Office and the soft copy be emailed to Jt. Registrar(Academic) <dracad@iitb.ac.in>*

Name of the Academic Unit: Department of Chemical Engineering

|    |                                                                                                                                                                                                                                                                                                                  |
